Personnel on the Poultry Site

Why is Biosecurity of Personnel Important?
It is possible to reduce the risk of Avian Influenza virus introduction to a premises if personnel take certain precautions, both prior to arrival at the site, and once on the site.

Prior to Arrival

- Determine if you will need to cross the Perimeter Buffer Area (PBA) and/or Line of Separation (LOS)
- Be aware that doing so will require following specific procedures depending on your job duties, if you are dedicated to the site or come from off-farm, and if you have had recent contact with poultry or other avian species
- You may need to sign an agreement ahead of time verifying that you have been informed of biosecurity protocols and will abide by them
- Recommended procedures to complete prior to arriving include
  - Showering and wearing clean clothing/footwear
  - Avoiding contact with poultry, poultry facilities, and areas where soiled vehicles associated with poultry have driven
  - Leaving unnecessary personal items at home
  - Ensuring that your vehicle interior is not contaminated

Entry Logbook

- You will need to log your entry upon arrival, which may include information such as in the example below:

<table>
<thead>
<tr>
<th>Date MM-DD-YY</th>
<th>Name</th>
<th>Affiliation</th>
<th>Phone Number</th>
<th>Reason for Entry</th>
</tr>
</thead>
</table>

On-Site Biosecurity Procedures

- Once on-site, you should refer to the site-specific biosecurity plan for information on:
  - Entering the Perimeter Buffer Area
  - Crossing the Line of Separation
  - Biosecure Entry and Exit Procedures based on your job duties
